Microscopic interactions in solids

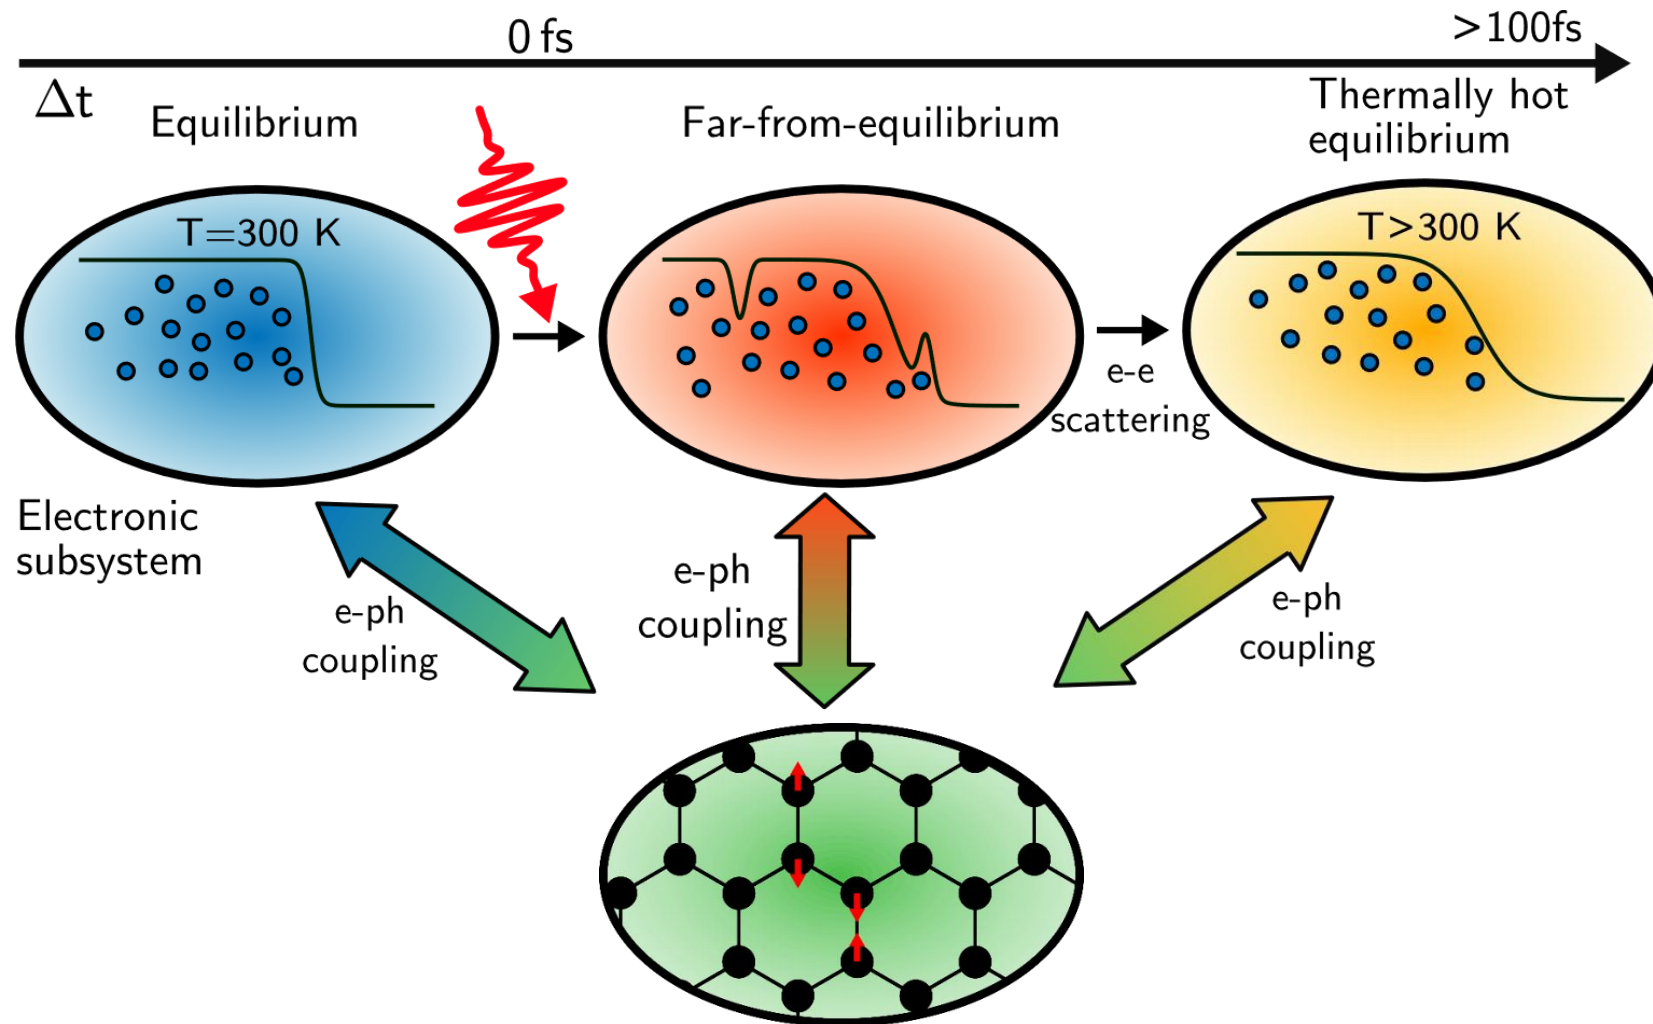

Quantum Materials

$$\hat{H} = H_{kin} + H_0 + H_{e-e} + H_{e-ph} + H_{SOC}$$

Matter, 2, 5, 6 May 2020, 1106-1114.

Far-from-equilibrium many-body interactions

Typical Questions:

- How do we characterize matter far away from equilibrium?
- How do we control materials on-demand?

Keunecke, ..., Reutzel, ..., Mathias, Rev. Sci. Ins. 91, 063905 (2020).

Emergent properties in moiré materials

Moiré potential

moiré interlayer excitons

Two major research questions:

- 1) How are ILX formed?
- 2) Impact of the moiré potential?

What do we need?

- femtosecond time-resolution
- 100 meV energy resolution
- momentum resolution

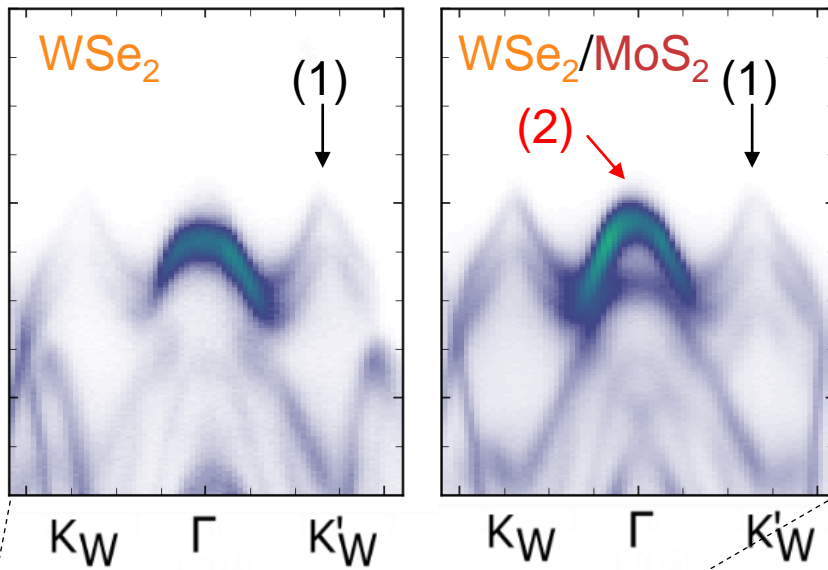

10° twisted WSe_2/MoS_2 : sample characterization

sample fabrication: [AbdulAziz AlMutairi](#) and [Stephan Hofmann](#), University of Cambridge

10° twisted WSe_2/MoS_2 : static band mapping

static band mapping

- (1) spin-split WSe_2 valence band
- (2) hybridized bands at Γ valley

Wilson *et al.*, *Sci. Adv.* **3**, e1601832 (2017).

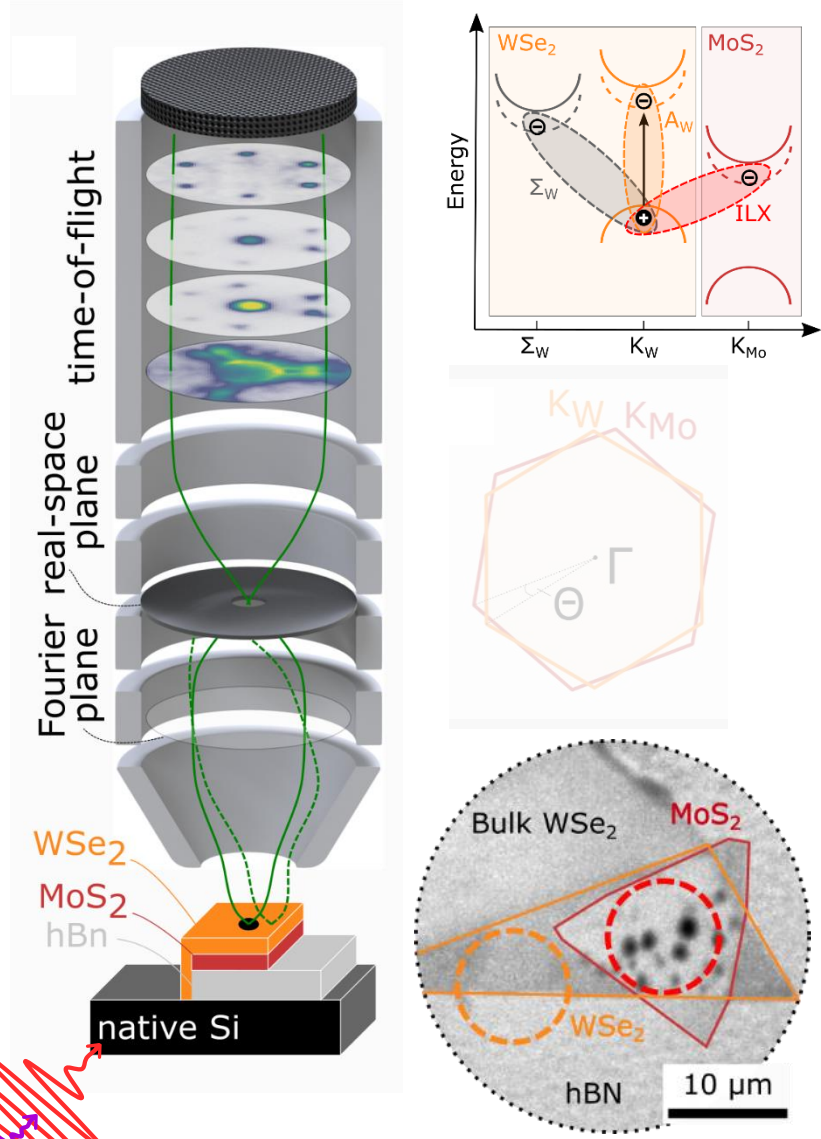

Open tasks: exciton dynamics and moiré hallmarks

Interlayer excitons probed in trARPES

identification of **ILX** in momentum integrated energy-distribution-curves
